Respirator Compliance

All employers have a duty to protect their employees at work and inform them of industry regulations, legislation and standards that are put in place to help keep them safe and healthy. **OSHA requires**

employers to establish and maintain a respiratory protection program to protect their employees who wear respirators. Listed below are some of the required items:

- Each employee that uses a respirator needs to fill out a medical evaluation questionnaire and be reviewed by a medical professional
- Establish a respirator change out schedule
- Employee fit testing is required once a year
- The employer needs to establish and retain written information regarding medical evaluations, fit testing, and the respirator program. One person should be assigned to oversee the program.

Most respirators have a maximum life of 80 hours. When not in use respirators need to be in a sealed bag or container. Some shops set up a respirator replacement schedule of the first and fifteenth of the

month to insure adequate employee safety. If you have any questions on the respiratory process, contact **Auto Body Supply** for more information.
