Tech Tip

Did You Know a Smaller Fluid Tip is Best for Exotic Aluminums?

OE manufacturers are turning towards more and more exotic colors to differentiate themselves in the market and these colors often require special pigments. Some colors in particular require a specialized aluminum in order to achieve that "liquid metal" or "solid steel" appearance.

OE manufacturers are turning towards more and more exotic colors to differentiate themselves in the market and these colors often require special pigments. Some colors in particular, such as Nissan KAB Super Silver or Mazda 46G Machine Gray, require a specialized aluminum in order to achieve that "liquid metal" or "solid steel" appearance.

When repairing these vehicles, it's important for the specialized aluminum to orientate properly. This is best achieved by using a smaller fluid tip. Tips of 1.0 – 1.1 are recommended. Restricting your spray gun fluid amount and applying thin, wet coats will help with the proper orientation as well.

Check out the technical bulletins for special colors such as these for more information on the recommended repair process. Technical bulletins can be found in the product catalog for each brand on ppgrefinish.com

NEW SATA Air Vision 5000

Your employees deserve absolute safety by means of clean air supplied from outside the spray booth. The SATA Air Vision 5000 puts the focus on effective health protection and lets you experience a whole new and comfortable way of breathing, due to a completely re-designed breathing air supply system. With its modern, ergonomic design, the Hood can be adapted to fit almost any head shape, allowing the individual adjustment of its effective circumference, height and position.

See your **ABS** sales staff for more information.
