 **Advanced  
Collision Estimating  
Skills Class**

**September 29<sup>TH</sup> & 30<sup>TH</sup> 2015**

**Marriott Cornhusker Hotel – Lincoln**

The damage estimate is the critical first step in the repair process. By doing it right consistently throughout performance, insurance relationships and profitability can improve dramatically. Get it wrong and vehicles sit and wait for supplement approvals as overall performance and customer satisfaction diminishes. Using real-world case studies, this 2-day course provides an in-depth review of the estimating process. It also highlights the best practices and tools needed for creating technically-accurate estimates that ensure established targets for quality, speed and costs are met. ***Estimating is a key area of focus when looking for process improvement opportunities.***

**TOPICS COVERED**

Business

**Dent Fix**

**Aluminum Hammer Set**

The Aluminum Hammer Set, Part # DF-AH714, can help technicians avoid unlike metal cross contamination on aluminum bodied vehicles. Because the lightweight aluminum hammers offer a

more forgiving strike compared to heavier steel hammers, users are less likely to damage aluminum body panels. Genuine hickory oval handles provide a solid base with less chance of breakage. **Three different heads included:**

- Circle Flat/Round Pick
- Circle Flat/Chisel Pick
- Circle Flat/Square Flat

Each hammer has a red mark on the top of the head to indicate the tools are for aluminum use only. When not in use, the hammers should be stored in the included blow molded case.

**Don't Take a Chance on Your Safety!**

We carry all the necessary safety items, including hearing protection, safety glasses, respirators, gloves and spray suits. Let us know what you need.
