GOING TO THE MATTE

EVERYTHING YOU NEED TO ACHIEVE AND REPAIR LOW-GLOSS FINISHES

Matte finishes have grown in popularity in recent years among OEM designers, refinishers and custom builders. OEMs, for example are using various degrees of gloss in clearcoat finishes for bumper, cladding and trim colors. Some manufactures are offering models with full low-gloss panels. To meet this growing trend, PPG has developed a full complement of products and helpful resources for creating and repairing low-gloss finishes.

- **Global Refinish**
D8115 Matte Clearcoat
D8117 Semi-Gloss Clearcoat
- **Onechoice Products**
SU4985 Universal Matting Agent
- **Vibrance Collection**
VC5225 Soft Touch Clear
- **Ditzler**
HRB9700 Hot Rod Black - 2K Single Stage
DSC5250 Satin Clear Kit

CARE AND MAINTENANCE GUIDE

Unlike a standard high-gloss coating, damage to a low-gloss coating caused by scratches or aggressive cleaning cannot be polished or buffed out. Once an area becomes damaged or burnished, the original matte or low-gloss appearance cannot be restored without performing a full refinish repair. For more information see the PPG Matte Finish Care Guide or visit www.youtube.com/ppgrefinish

Refinish Training keeps pace with OEM color advances

Are your paint techs up-to-speed with skillfully matching today's sophisticated vehicle colors? Stay up to date and register them for a PPG training course. Painters receive the latest, hands-on instruction for matching translucent finishes and complex tri-coats, as well as how to speed up process times using the latest product advancements. Contact **ABS** for a list of upcoming training courses or check our website at www.autobodysupplylincoln.com

Our 2nd Annual Holiday Food Drive was a success. 416 pounds of food and \$910.00 was donated to the Food Bank of Lincoln. Thank you to everyone who contributed.
