KEY COMPONENTS

To Maintaining Success in the Auto Body Industry

EDUCATION is vital in order to keep up in our constantly changing industry. You can't keep doing what you've always done or you will fall behind. Talk with us about the wide choice of training curriculum offered by **AUTO BODY SUPPLY & PPG** to ensure that your knowledge and skills stay abreast of the latest products, technologies, equipment and collision repair processes.

TRACKING - Using **PPG's Paint Manager**, you can track how much liquid is mixed per technician, per R.O., per date range, and per product group. By using **Volume Estimator**, the computer will suggest how much product to mix based upon the size of the repair. Do you see half full cups lying around the paint bench? Paint Manager can help minimize waste.

MONITORING - Can you currently track Primer, Color, and Clear average oz. per R.O.? Do you know your materials used versus gross sales? **AUTO BODY SUPPLY & PPG** have the technology to do this. Contact us for more information.

Kevin Neujahr is our newest staff member. Kevin is a graduate of SCC Milford in the Auto Body Technology program, and has 30 years experience as a auto body technician. Kevin's primary duties will be working inside sales and outside delivery. We welcome him to our staff!

NEW SATA PRODUCT

The new DanAm Air Vac from Dan Am Company removes foreign objects from wet paint. Eliminate dirt nibs, bugs, lint, hair or other airborne debris right after it lands. The DAA Vac simply connects to your existing airline in the booth. Open the valve and the air creates a vacuum through the tool. Use the fine clear disposable tips to remove the debris from the clear and use the disposable dropper to put a drop of clear back in the void. The clear will melt into the wet surface and you may have very light sanding and polish for perfection if any at all.
