PPG Announces Dazzling Additions to Ditzler Big Flake Line

PPG Automotive Refinish has supplemented its Ditzler Big Flake product line with seven brilliant new flakes. The addition brings to 13 the number of Ditzler Big Flake selections available. The popular flakes, intended for use with PPG's Vibrance Collection brand of custom colors and special effect finishes, add intense color and sparkle to custom car, truck or motorcycle finishes and are frequently found on award-winning show vehicles. The new flakes are mini gold, mini silver, red, orange, blue, purple and green and are coded VM4420 through VM4426, respectively.

"Painters and designers will now have even more flake options when allowing their imaginations to run free," said Jennifer Boros, PPG brand manager, premium solvent-borne brands. "In combination with our Vibrance Collection products, the dazzling effects that can be created are almost limitless. Adding more choices to the Ditzler Big Flake line is part of PPG's commitment to give our customers everything they need to turn out the custom finishes they want."

Ditzler Big Flake products can be used to create a broad spectrum of basecoat and tricoat custom color formulations. The large flakes can be added directly to basecoats or used as a ground coat for Radiance II midcoats. They can also be added to color blenders or PPG's Radiance II and used as a midcoat or pearlcoat effect.

PPG Training

Start the New Year off by taking advantage of the training that PPG has to offer. Today, insurance companies are demanding more from the body shops and you need to know how to be as efficient as possible.

PPG offers painter certification along with the MVP training (ppgmvp.com) for management and office staff. It can be an estimating class to help you get the most out of an estimate or a marketing class to help you get that extra bang for the buck in your advertising.

The bottom line is that in order to stay competitive in today's market, you must invest in improvements to yourself and your business through education.

We all say we don't have time to go to a class but in reality you can't afford not to go. Make a commitment to attend a training class in 2013.

Check with the staff at **Auto Body Supply** or ppgrefinish.com for a class schedule.

IWATA WS400 SUPER NOVA

The NEW WS400 with the patented "LV Technology" nozzle design combines a higher fluid delivery that facilitates a faster smoother application. The result is a higher transfer efficiency rate resulting in greater material savings.
